1 PROJECT ABSTRACT

Blog Application is Spring boot RESTful application with MySQL, where it allows to manage the blogs and can post comments on the blog.

Following is the requirement specifications:

	Blog Application
Modules	
1	Blogs
2	Comments
Blog Module Functionalities	
1	Create a Blog
2	Update a Blog
3	Delete a Blog
4	Get the Blog by Id
Comment Module Functionalities	
1	Post a comment on the Blog

2 Assumptions, Dependencies, Risks / Constraints

2.1 BLOG CONSTRAINTS:

- While fetching the Blog by Id, if Id does not exist then operation should throw custom exception.
- While Updating the Blog by Id, if Id does not exist then operation should throw custom exception
- While deleting the Blog by Id, if Id does not exist then operation should throw custom exception

2.2 COMMENT CONSTRAINTS

 If you want to post a comment on a blog, if blog id does not exists, then operation should throw a custom exception.

Common Constraints

- For all rest endpoints receiving @RequestBody, validation check must be done and must throw custom exception if data is invalid
- All the business validations must be implemented in dto classes only.
- · All the database operations must be implemented on entity object only
- · Do not change, add, remove any existing methods in service layer
- In Repository interfaces, custom methods can be added as per requirements.
- All RestEndpoint methods and Exception Handlers must return data wrapped in ResponseEntity

3 BUSINESS VALIDATIONS

- Blog title is not null, min 3 and max 100 characters.
- Blog content is not null, min 3, max 200 characters.
- Comment blog id is not null.
- Comment comment is not null, min 3 and max 200 characters.

4 REST ENDPOINTS

Rest End-points to be exposed in the controller along with method details for the same to be created

4.1 BOOKSCONTROLLER

U	IRL Exposed	Purpose		
1. /api/blogs Http Method POST		Successful Blog creation Response code: 20		
		(Created)		
Parameter 1	BlogDto	If title or content is blank then Response		
Return BlogDto		code: 400 (Bad request)		
/api/blogs/{id}		If blog id is valid then Response code: 200		
Http Method GET		(OK)		
Parameter 1	Long(id)	If blog id is invalid then Response code: 404		
Return	BlogDto	(Not Found)		
/api/blogs/{id}	70.	For valid blog id Response code: 200 (OK)		
Http Method	PUT	For invalid blog id:		
Parameter 1	Long(Id)	404 (Not Found)		
Parameter 2	BlogDto			
Return	BlogDto			
/api/blogs/{id}		For valid blog id Response code: 200 (OK)		

Http Method	DELETE	For invalid blog id:
Parameter 1	Long(Id)	404 (Not Found)
Return	Boolean	
		1
api/blogs/commen	t	For valid blog id Response code: 200 (OK)
api/blogs/commen	POST	For valid blog id Response code: 200 (OK) For invalid blog id:

5 TEMPLATE CODE STRUCTURE

5.1 PACKAGE: COM.IIHT.TRAINING.BLOGS

SpringbootBlogsServiceApplication	This is	the	Spring	Boot	Already Implemented.
(Class)	starter	clas	s of	the	You are free to add
у.	applicati	on.		73	any bean in this class.

5.2 PACKAGE: COM.IIHT.TRAINING.BLOGS.ENTITY

Class/Interface	Description	Status
BlogEntity (class)	 Annotate this class with proper annotation to declare it as an entity. class with id as primary key. You can use javax package for annotations. Map this class with blogs table. Generate the id using IDENTITY strategy 	Partially implemented.
CommentEntity(class)	 This class is partially implemented. Annotate this class with proper annotation to declare it as an entity class with id as primary key. You can use javax package for annotations. Map this class with comments table. Generate the id using the IDENTITY strategy 	Partially implemented.

5.3 PACKAGE: COM.IIHT.TRAINING.BLOGS.DTO

Class/Interface	Description	Status
BlogDto (class)	Use appropriate annotations from the Java Bean Validation API for validating attribute of this class. (Refer Business Validation section for validation rules).	Partially implemented.
CommentDto (class)	Use appropriate annotations from the Java Bean Validation API for validating attribute of this class. (Refer Business Validation section for validation rules).	Partially implemented.

5.4 PACKAGE: COM.IIHT.TRAINING.BLOGS.REPOSITORY

Class/Interface	Description	Status
BlogRepository (interface)	Repository interface exposing CRUD functionality for Blog Entity. You can go ahead and add any custom methods as per requirements	Already implemented
CommentRepository (interface)	Repository interface exposing CRUD functionality for Comment Entity.	Already implemented

2.	2. You can go ahead and add any				
	custom	methods	as	per	
	requirem	ents			

5.5 PACKAGE: COM.IIHT.TRAINING.BLOGS.SERVICE

Class/Interface	Description	Status
BlogService (interface)	Interface to expose method signatures for Blog related functionality. Do not modify, add or delete any method	Already implemented.
CommentService (interface)	Interface to expose method signatures for Comments related functionality. Do not modify, add or delete any method	Already implemented.

5.6 PACKAGE: COM.IIHT.TRAINING.BLOGS.SERVICE.IMPL

Class/Interface	Description Status
BlogServiceImpl (class)	Implements BlogService. To be implemented.
	Contains template method
	implementation.
	Need to provide
	implementation for Blog related
	functionalities
	Add required repository
	dependency

	Do not modify, add or delete any method signature	
CommentServiceImpl (class)	 Implements CommentService. Contains template method implementation. Need to provide implementation for student related functionalities Add required repository dependency Do not modify, add or delete any method signature 	e implemented.

5.7 PACKAGE: COM.IIHT.TRAINING.BLOGS.EXCEPTION

Class/Interface	Description	Status
GlobalHandler (class)	 RestControllerAdvice Class for defining global exception handlers. Contains Exception Handler for InvalidDataException class. Use this as a reference for creating exception handler for other custom exception classes 	Partially implemented.
ExceptionResponse (class)	Object of this class is supposed to be returned in case of exception through exception handlers	Already implemented.

Class/Interface
BlogNotFoundException (Class)

5.8 PACKAGE: COM.IIHT.TRAINING.BLOGS.CONTROLLER

Class/Interface
BlogController (Class)

6 EXECUTION STEPS TO FOLLOW

- All actions like build, compile, running application, running test cases will be through Command Terminal.
- To open the command terminal the test takers, need to go to Application menu (Three horizontal lines at left top) -> Terminal -> New Terminal
- 3. To build your project use command:

mvn clean package -Dmaven.test.skip

4. To launch your application, move into the target folder (cd target). Run the following command to run the application:

java -jar springboot-blogs-service-0.0.1-SNAPSHOT.jar

- 5.This editor Auto Saves the code
- 6. If you want to exit(logout) and continue the coding later anytime (using Save & Exit option on Assessment Landing Page) then you need to use CTRL+Shift+B-command compulsorily on code IDE. This will push or save the updated contents in the internal git/repository.
 Else the code will not be available in the next login.
- 7. These are time bound assessments the timer would stop if you logout and while logging in back using the same credentials the timer would resume from the same time it was stopped from the previous logout.

 To test any Restful application, the last option on the left panel of IDE, you can find ThunderClient, which is the lightweight equivalent of POSTMAN.

 This is a web-based application, to run the application on a browser, use the internal browser in the workspace. Click on the second last option on the left panel of IDE, you can find Browser Preview, where you can launch the application.

Note: The application will not run in the local browser

10. Default credentials for MySQL:

a. Username: root

b. Password: pass@word1

- 11. To login to mysql instance: Open new terminal and use following command:
 - a. sudo systemctl enable mysql
 - b. sudo systemctl start mysql

NOTE: After typing any of the above commands you might encounter any warnings.

- >> Please note that this warning is expected and can be disregarded. Proceed to the next step.
- c. mysql-u root-p

The last command will ask for password which is 'pass@word1'

- 12. Mandatory: Before final submission run the following command:

 mvn test
- 13. You need to use CTRL+Shift+B command compulsorily on code IDE, before final submission as well. This will push or save the updated contents in the internal git/repository, and will be used to evaluate the code quality.
